

Your AI career advantage is not “using ChatGPT”.

It is knowing how to redesign work with AI, verify the result, protect data and remain accountable.

Build proof, not just prompts.

Use this starter pack to identify your current level, choose a role pathway and produce one portfolio artifact in 30 days.

1

Choose a track

Finance, Operations or
Career & Portfolio.

2

Check your level

Explorer, Collaborator or
Workflow Builder.

3

Ship evidence

One small, safe workflow
you can explain.

Keep the human in charge. Never paste confidential, personal or company-sensitive data into an AI tool unless your organisation has approved the tool and the use.

Five employable AI capabilities

Tools will change. These capabilities travel with you.

1

Problem framing

Define the task, user, evidence, constraints, expected output and stop conditions before asking AI to act.

2

Workflow design

Break work into inputs, decisions, steps, handoffs, checks and approvals—not one giant prompt.

3

AI collaboration

Give useful context, ask for structured outputs, refine with feedback and know when to take over.

4

Verification & governance

Check facts, calculations, sources and policy; protect data; record decisions; keep accountable humans in the loop.

5

Evidence of application

Show a portfolio artifact: a before/after process map, tested instruction set, review checklist, decision log or bounded workflow prototype.

Interview translation: “I used AI” is weak. “I mapped the process, limited the data, designed review gates, tested exceptions and documented the result” is credible.

Where are you now?

Tick every statement you can demonstrate, not merely explain.

Explorer

- ✓ I can describe a work problem clearly.
- ✓ I know AI can be wrong.
- ✓ I avoid sensitive data.
- ✓ I can compare two outputs.

Collaborator

- ✓ I provide context and a format.
- ✓ I refine AI with feedback.
- ✓ I verify claims and calculations.
- ✓ I can explain what the human owns.

Workflow Builder

- ✓ I map multi-step work.
- ✓ I define approval and exception gates.
- ✓ I test normal and failure cases.
- ✓ I produce an audit trail or portfolio proof.

Your result

Mostly Explorer: learn safe, structured collaboration. Your next artifact is a tested instruction-and-review card.

Mostly Collaborator: move from good prompting to a repeatable workflow. Your next artifact is a before/after process map.

Mostly Workflow Builder: strengthen governance, testing and business evidence. Your next artifact is a workflow blueprint with approval gates and a test log.

Score it: count ticks in each column. Use the highest count; move up on a tie only when you ticked at least three statements in the higher level. Your level is task-specific, not permanent.

Accounting & Finance

Use AI to prepare, compare and explain. Keep evidence, judgement and sign-off with people.

USE CASE	AI CAN ASSIST WITH	THE HUMAN REMAINS ACCOUNTABLE FOR
Reconciliation review	Grouping exceptions and drafting an investigation list.	Source completeness, matching rules, unresolved items and sign-off.
Policy research	Summarising approved source material with citations.	Authoritative interpretation, currency and professional advice.
Receivables	Prioritising follow-up drafts by approved criteria.	Customer context, disputed items, tone and sending approval.
Audit preparation	Creating evidence indexes and request checklists.	Evidence integrity, completeness, independence and final conclusions.

Portfolio artifact

Maker-checker workflow map: one finance task, approved input list, AI draft step, verification checklist, exception route, sign-off owner and short test log using synthetic data.

Never use real financial or customer data in a public portfolio. Replace names and figures with synthetic examples and explain the privacy boundary.

Business Operations

Use AI to turn recurring coordination into visible, controlled workflows.

USE CASE	AI CAN ASSIST WITH	THE HUMAN REMAINS ACCOUNTABLE FOR
SOP drafting	Converting interviews and notes into a consistent first draft.	Process accuracy, safety, exceptions and owner approval.
Meeting follow-up	Extracting proposed actions and open questions.	Correct owners, deadlines, commitments and distribution.
Customer operations	Classifying requests and drafting responses.	Policy, tone, exceptions, privacy and external send.
Vendor comparison	Normalising features and drafting comparison tables.	Requirements, source validity, commercial judgement and selection.

Portfolio artifact

Human-controlled operations blueprint: show triggers, inputs, AI role, tools, decision points, approval gates, exception handling, audit evidence and a success measure.

Career & Portfolio

Show employers how you think about work—not just which tools you tried.

Choose a bounded task

A recurring task you understand: research synthesis, report drafting, process documentation or issue triage.

Create a safe example

Use public or synthetic data. State what you excluded and why.

Document the workflow

Inputs → AI-assisted steps → checks → human decision → output.

Show evidence

Before/after comparison, test cases, errors found, revisions and a short reflection.

Your one-page case study

Problem: what work needed improvement and for whom?

Design: what role did AI play, and what stayed human?

Controls: how did you verify quality and protect data?

Evidence: what changed, what failed and what did you learn?

Suggested interview line: “I do not automate responsibility. I use AI for bounded preparation and execution, then make the checks, decisions and approvals explicit.”

Portfolio quality test

- ✓ A stranger can understand the task in 30 seconds.
- ✓ The AI role and human role are visibly different.
- ✓ You show at least one failure or correction.
- ✓ No confidential information is exposed.
- ✓ You can explain what you would improve next.

From curiosity to career evidence

1

Days 1–7 · Frame

- ✓ Choose one recurring task.
- ✓ Define the user and desired outcome.
- ✓ List approved inputs and excluded data.
- ✓ Write three failure conditions.

2

Days 8–14 · Design

- ✓ Map steps and decisions.
- ✓ Assign the AI and human roles.
- ✓ Add verification and approval gates.
- ✓ Create synthetic test material.

3

Days 15–21 · Test

- ✓ Run three normal cases.
- ✓ Run two edge/failure cases.
- ✓ Record errors and corrections.
- ✓ Refine the workflow, not just the prompt.

4

Days 22–30 · Prove

- ✓ Create a one-page case study.
- ✓ Add the process map and review checklist.
- ✓ Ask someone to challenge it.
- ✓ Prepare a 60-second explanation.

My commitment

By _____, I will produce _____ for the role of _____.

The human decision that must remain explicit is _____.

Apply for a 15-minute AI career consultation

Receive one personalised AI-career recommendation and one practical next step for your target role.

Best suited for

- ✓ Career-fair visitors exploring accounting, finance, operations or business roles.
- ✓ People who can name one target role or work task.
- ✓ People willing to take one practical action after the call.

15-minute agenda

1. **0–3 min:** target role and current context.
2. **3–8 min:** task and AI-capability gap.
3. **8–12 min:** personalised recommendation.
4. **12–15 min:** one next step and resources.

Capacity language: Applications are reviewed for fit and available founder capacity. Applying does not guarantee a consultation. If all slots are allocated, we may offer a waitlist, resource follow-up or group career briefing instead.

What we will ask

- ✓ Your current or target role.
- ✓ One task you want AI to improve.
- ✓ Your current AI experience: Explorer, Collaborator or Workflow Builder.
- ✓ Your main concern or question.
- ✓ Your preferred consultation windows.

One useful next step.

Choose the task you want to improve and speak with the Nexius Labs booth team about the application-based founder consultation. For guided learning, use the verified Nexius Academy registration QR on the next page.

Agentic AI Foundations for Non-Technical Professionals

A practical, no-code course for turning everyday work into governed AI-assisted workflows with human review built in.

Course at a glance [1]

Duration: 2 days / 16 hours · **Format:** in person · **Prerequisite:** no technical knowledge required · **Venue:** Singapore Institute of Management, 461 Clementi Road, Singapore 599491.

September 2026 cohort

18 & 25 September 2026

9:00am–6:00pm · In person

October 2026 cohort

9 & 16 October 2026

9:00am–5:00pm · In person

[1] Live Nexus Academy course page and registration form verified 28 August 2026. Course availability, fees, funding and eligibility remain subject to the current registration page and final learner confirmation.

Do not try to “learn all of AI”.

Choose one role. Improve one real task. Keep the human accountable.
Show the evidence.

Orchestrate. Don't operate.

Make the work visible: context, steps, tools, checks, approvals, evidence and ownership.

1 • Select

Accounting & Finance,
Business Operations, or
Career & Portfolio.

2 • Build

Complete the 30-day plan
with safe, synthetic data.

3 • Explain

Show what AI did, what
you checked and what
you owned.

Ready for guided practice?

Scan to open the Nexius Academy registration form for the
September and October Agentic AI Foundations cohorts.
